

380V Data Center Cabinet for Distributed Energy Use

380V DC power systems are the future of data center power distribution, forever changing the data center landscape as we migrate toward a cleaner, more energy efficient and sustainable industry.

Power conditioning and distribution cabinet that offers the benefits of a custom-tailored system, with the convenience and cost savings of a pre-packaged, factory-tested system.

For power distribution requirements of medium to large data centers, Delta's Power Distribution Unit (PDU) is an optimal solution. The space-saving PDU is easy to move and adapt to the future demands of the data center.

This image illustrates the electrical infrastructure of a data center, showcasing how power flows through various components to ensure continuous and reliable operation.

From highly resilient electrical DC power plant designs to efficient integration with renewal energy power grids, your infrastructure will be ready to handle the next decade of IT evolution. Contact us to today to learn about ...

This paper presents an overview of the case for the application of 380 Vdc as a vehicle for optimization and simplification of the critical electrical system in the modern data center.

Cabinet systems that use a modular, holistic approach to integrating thermal and power management facilitate cost-effective scalability for data centers to support increasing rack power densities while optimizing energy ...

The right power distribution cabinet protects uptime, passes inspections, and scales with your load roadmap. This buyer's checklist helps procurement managers balance compliance, reliability, and total ...

Our power distribution units will improve your data centers' energy efficiency, climate footprint, and uptime. Explore our solutions here.

Integrate power distribution into the rack environment, with the rack-sized Liebert FDC. The stand-alone cabinet blends physically and cosmetically with rack equipment, while offering the distribution capabilities of a much ...
