

Want to learn more about how Belgian data centers are leveraging innovation to shape the future? ? Read the full report and discover the strategies and technologies driving our sector...

Read the full analysis and gain a future-ready perspective on Belgium & Europe's energy storage frontier.

The 2.75 MW battery-based energy storage system provided by Fluence, the first of its kind for Google, supplies the hyperscale data centre facility in St. Ghislain with zero-emission electricity during grid ...

Google has is using a 2.75MW battery system from Fluence to replace some diesel capacity at its St. Ghislain, Belgium data center, reducing emissions and supporting the local electricity grid.

With this innovative approach, and thanks to the close collaboration between our teams worldwide, we contribute to the realization of energy-efficient and sustainable data center solutions in Belgium.

Google has also signed new long-term agreements for over 110 MW of carbon-free energy with local providers Eneco, Luminus, and Renner. The company aims for 24/7 carbon-free operations at its data ...

Discover how advanced UPS solutions protect Belgium's growing data center industry from power disruptions while optimizing energy efficiency. Learn about tailored approaches for mission-critical infrastructure in one of ...

Read the full report to understand how AI, cloud computing, and energy policy are becoming increasingly interconnected--and why the choices Belgium makes today will shape its digital and energy ...

Google has hailed the imminent completion of a project to retrofit one of its data centres in Europe with battery energy storage system (BESS) technology as a step towards rolling out similar ...

For new data centers with low latency requirements, France, the Nordics, and some regions in Spain stand out as top locations in Europe, offering low-cost power, strong green energy availability, and connection ...
