

The Electricity Distribution Project aims to strengthen the grid through upgrades and repairs; constructing a new national electricity distribution control center; and connecting 10,000 new households in Cotonou, Benin's ...

The Benin Power Compact's end date was June 22, 2023. The compact is now closed. MCC's \$391 million Benin Power Compact tripled the nation's grid capacity and is projected to benefit more than 11 million ...

This paper summarizes the current RE situation in Benin and examines its future prospects. The current energy situation of the country is discussed, followed by an examination of its electricity demand-and ...

Benin is heavily dependent on external sources, particularly Nigeria and Ghana (more than 90%) for its electricity supply.

This initiative represents a major step toward reducing energy inequalities, stimulating the rural economy, and advancing Benin's transition to decarbonized energy.

Results show that 58-92% of the population in 2030 is expected to receive electricity from the grid. The remaining 8-42% is expected to gain electricity access through mini-grids or stand-alone systems.

Electricity demand in Benin has continuously increased due to rapid population growth, and demand is expected to increase further in coming years.
