

To achieve SB 100, California will build an unprecedented amount of new clean energy resources. The 2021 report recommended further analysis on 1) grid reliability, 2) emerging resources, and 3) ...

California's RPS is among the most ambitious clean energy policies in the nation. The RPS requires electric utilities and other load-serving entities to procure increasing amounts of renewable energy to ...

The California Energy Commission verifies the eligibility of renewable energy procured for Renewables Portfolio Standard (RPS) compliance periods by retail sellers and publicly owned ...

The guidebook describes the eligibility requirements and processes for certifying renewable resources as eligible for California's RPS and describes how the Energy Commission tracks and verifies ...

Renewable energy targets are the cornerstone of the California Renewable Portfolio Standard (RPS). They establish the mandated percentage of electricity that retail sellers must ...

The most comprehensive source of information on incentives and policies that support renewables and energy efficiency in the United States. Managed by ...

This page identifies and describes the features of the RPS and how they work together to define the minimum amount of renewable energy that will be sold in California.

The state's Building Energy Efficiency Standards have saved Californians billions of dollars in reduced electricity bills. They conserve nonrenewable resources, such as natural gas, and ensure ...

The Renewables Portfolio Standard (RPS) is one of California's key programs for advancing renewable energy. The program sets continuously escalating renewable energy ...

California's RPS, or Renewable Portfolio Standard, requires electric utility companies to obtain a certain percentage of their energy from renewable sources. This incentivizes the development of clean ...

Unpack the RPS mandates, legal definitions, and regulatory structure governing California's mandatory renewable energy transition.

Monitor real-time grid conditions. View current and historical data for demand, net-demand, supply, renewables, CO2 emissions and wholesale energy prices.

Extensive systems of verification from both the CPUC and the California Energy Commission (CEC) ensure

that retail electricity providers are complying with RPS requirements or are penalized ...

The Energy Code is designed to be cost-effective so that structures built to code are still affordable, while helping California manage energy demand and advance the state's climate and clean air goals ...

When the Renewables Portfolio Standard (RPS) program began in 2002, renewable resources made up a small portion of the electricity consumed by Californians. Today, California is well on its way to ...

The California Energy Commission (CEC) is responsible for the certification of electrical generation facilities as eligible renewable energy resources and adopting regulations for the enforcement of ...
