

Clean solar energy from Argentina's power plant

Argentina has taken another step towards the future of renewable energy. All thanks to the inauguration of the largest photovoltaic plant in South America. Located in the Puna of Jujuy, the ...

Faced with the urgent challenge of climate change, Argentina needs to transform its energy matrix to use renewable sources. The energy transition (ET), focused on adopting clean ...

The use of solar power has prevented the emission of more than 5 million tons of carbon dioxide into the atmosphere--equivalent to taking 1 million cars off the road for a year. Argentina's ...

The initiative **is** led by a state energy company that, for years, has made the sun its main source of supply. In that region, **more than 60%** of the energy comes from the sun, ...

During November, renewable sources in Argentina marked a record contribution to total generation, with 2,249 GWh, the third consecutive month in which the production of clean energy ...

Argentina increases its solar power capacity by almost 25% Argentina has sharply accelerated the rate of bringing its solar power plants into operation. According to the national ...

Argentina is a land of abundant energy resources, both conventional and renewable. This chapter provides an overview of Argentina's energy landscape with a focus on its solar energy ...

There is a large gap between the vast solar resources and the magnitude of solar energy deployment in Argentina. In the case of photovoltaics, the country only reached the 1000 GWh ...

Argentina's vast solar, wind, and hydroelectric renewable energy potential, give it the possibility to decarbonize its power sector and support its COP26 goal of increasing the share of ...
