

First, lower growth in major trading partners will lower demand for oil, in turn, reducing the economic rationale for further exploration in Azerbaijan. This, in turn, implies that the oil sector may face a ...

The combination of stable energy prices and increasing demand for Azerbaijan's energy products is expected to support high levels of oil and gas revenues, despite declining oil output and rising gas ...

In this study, a proposed approach for assessing the real option of demand response programs for electric companies is offered to supply the best possible electricity to consumers.

The demand response management system (DRMS) market in Azerbaijan involves the deployment of software platforms and solutions that enable utilities and energy consumers to manage and optimize ...

Imports are seen diminishing in 2023 because of lower domestic demand but then rising in 2024 as growth accelerates and demand revives. Higher inflows from transport and tourism services will ...

This infographic summarizes results from simulations that demonstrate the ability of Azerbaijan to match all-purpose energy demand with wind-water-solar (WWS) electricity and heat supply, storage, and ...

Italy further solidified its position as Azerbaijan's top export destination, with its share climbing from 36.4 percent to 46.5 percent, driven primarily by strong demand for Azerbaijani oil and ...

Domestic demand is constrained by slower wage growth and cautious consumer sentiment, while investment remains tepid, especially in hydrocarbons. The outlook for 2026-2027 hinges on the pace ...

Azerbaijan is now in a transition phase toward a more balanced growth model. Concrete measures are being taken to advance transportation, agriculture, industry, services and the digital ...

Today, utilities are increasingly turning to non-wire alternative programs, like demand response, for answers. To jumpstart your demand response journey, we've identified three elements that will help ...
