

Solar power generation in Britain so far this year has surpassed the total for 2024 as panels are rapidly installed amid favourable weather, underlining renewable energy's increasing...

Winchester followed with 953 solar PV installations, ranking it second in the country for uptake, as 1.84% of households now have solar power. Reports by the Campaign to Protect Rural England (CPRE) ...

The first large solar farm in the United Kingdom, a 32 MW solar farm, began construction in November 2012 in Leicestershire, between the runways of the former military airfield, Wymeswold.

But solar-powered electricity rose by nearly a third on 2024 levels, helped by the UK's sunniest year on record and the expansion of solar panels around the country.

Solar power currently produces 25% of the UK's renewable energy, which itself accounts for 43% of total energy, which means that approximately 11% of the nation's power comes from solar.

The highest UK solar output on record was reached at 13:00 on 6 April, when the technology was delivering 13.2GW of power and meeting 40% of demand for that half-hour period.

The UK's solar capacity is on track to reach a minimum of 45 GW by the end of the decade, as part of the country's goal of decarbonizing the power sector and becoming a "clean-energy superpower."

More than 1.5m homes across our country now have solar installed, and since this government came to office my department has consented almost 3GW of nationally significant solar projects -...

Renewables now provide 37% of the UK's electricity, surpassing fossil fuels for the first time. Solar panel costs have dropped by 90% globally, making solar more affordable than ever. Major challenges ...

Solar deployment hit 18 GW in the United Kingdom at the end of February 2025, according to the latest DESNZ figures. This represented a 1.1 GW increase in deployed capacity since February...
