

Below are various statistics for installations within the GESDB. Note that visualizations may take a moment to load. The data in this database is still being validated, and will be updated in the next ...

The following resources provide information on a broad range of storage technologies.

A database that contains energy storage projects and policies listed under the DOE,

The battery storage technologies do not calculate levelized cost of energy (LCOE) or levelized cost of storage (LCOS) and so do not use financial assumptions. Therefore, all parameters are the same for ...

The DOE Global Energy Storage Database provides research-grade information on grid-connected energy storage projects and relevant state and federal policies. All data can be exported to Excel or ...

Battery storage. In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record ...

NLR offers a diverse range of data and integrated modeling and analysis tools to accelerate the development of advanced energy storage technologies and integrated systems.

DOE Global Energy Storage Database Continually evolving to address the data needs of emerging industry

This database can be quickly built upon to add future energy storage technologies and update the status of those already on the list. We believe this resource can bring value to EPRI ...
