

ely integrated within Europe. Finland is part of the Nord Pool power exchange, which operates in 16 European countries, including the Nordics Baltics, Germany and the UK. High-voltage interconnectors link the national ...

ficiency across various sectors. In recent years, Finland's energy landscape has shifted significantly, moving away from coal and other fossil fuels and increasing its reliance on renewables, nuclear power,

Contrary to popular belief, Finland's solar energy potential doesn't fall short of that of Central Europe. In the summer, the long days and nearly round-the-clock sunlight compensate for the dark winters.

With fossil fuels now accounting for close to none of the electricity generation, Finland is setting an example for other nations in reducing carbon emissions from electricity consumption.

We dig into the country's pragmatic approach to nuclear power, how its relationship with neighboring Russia has shaped its energy independence and security strategies, and how Finnish industry ...

Finland's Energy and Climate Plan Update outlines the impact of the confirmed policy measures on the projected development of greenhouse gas emissions, renewable energy and energy efficiency until 2040.

Solar power in Finland is contributing to the transition towards low-emission energy production. Technological development, falling costs and climate goals have together accelerated the spread of solar ...

Finland is undergoing a major energy transition. Moving away from imported fossil fuels and towards local, clean energy production will create the basis for new industrial investment. In addition to wind power, we also need ...

Finland's updated integrated climate and energy plan aims for at least a 62 % share of renewable energy in final energy consumption by 2030. Alongside mitigating climate change, a key motivation is the ...

The most significant sources of renewable electricity production in Finland are wind power, hydropower and wood-based biofuels, with solar power increasing rapidly as well.
