

Alongside wind and solar, the country will orderly advance major hydropower projects, actively and safely develop nuclear power, and improve the clean and efficient use of fossil fuels, ...

Distributed solar accounts for 41% of the total solar capacity and has experienced a higher growth rate than centralized solar since 2021. The growth is attributed to the advantages of lower ...

The construction of solar power plants in remote areas reduces the energy losses associated with long-distance transmission. Unlike traditional power plants, modular solar energy ...

So there is a lot of uncertainty in the Chinese solar industry, but there are also irrefutable facts: China needs to continue to expand domestic solar capacity to reach its climate target....

By integrating aquaculture and PV power generation, the project pioneers a new model where power is generated above while fish are farmed below. The project generates approximately ...

With installations surging across major markets and China driving the charge, 2025 is on track to be another record-breaking year for solar power.

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

Over the past decade, China has helped reduce the average cost per kilowatt-hour of global wind power projects and PV power generation projects by 60 percent and 80 percent, ...

China will need to install around 10,000 gigawatts (GW) of wind and solar capacity to reach carbon neutrality by 2060, according to new Chinese government-endorsed research.

A strong growth in solar power is projected to drive the expansion of China's renewable energy generation capacity in 2026, even as average wind power utilization hours decrease slightly ...
