

Epic Resins supplies structural and bonding adhesives capable of adhering to primed metals and epoxy/fiberglass laminate types commonly found in the manufacturing of windmill blades. These ...

This product is suitable for mechanical glue, at room temperature after coating, and then through the 70 ° ~ 80 ° heat curing, cooling to achieve the best performance.

As the global wind energy industry continues to evolve, how will adhesive bonding adapt? Adhesives are a critical contributor to the structural load-bearing performance of the final wind blade assembly.

Scientists at Fraunhofer IWES have therefore combined the experiences they have gained during a decade of research into rotor blade manufacture and developed a solution which ...

There are two main designs of wind turbine blade. These are outlined on the following page, where we illustrate where the adhesive is applied and explain the different requirements and ...

Structural adhesives for wind turbine blades are specialized bonding agents formulated to join composite materials used in blade construction. These adhesives are typically epoxy-based,...

They offer easy cleanup, rapid curing over a wide temperature range and superior strength and resistance. All these benefits make Plexus two-part adhesives the ideal method for repairing and ...

Sika has successfully developed bonding solutions that blade manufacturers have come to rely on, providing a robust and reliable production process that ensures long blade service life even when ...

In accordance with aspects of the invention, a method of adhering component parts of a wind turbine blade along an adhesive line is provided.

Bonding the two halves of the rotor blade is a complex and time-consuming process. The option of choosing different adhesives not only improves the overall efficiency of the bonding ...
