

Is shared energy storage a carbon-oriented planning method for Integrated Energy Systems?

With the development of energy storage technology and sharing economy, the shared energy storage in integrated energy system provides potential benefit to reduce system operation costs and carbon emissions. This paper presents a bi-level carbon-oriented planning method of shared energy storage station for multiple integrated energy systems.

Can a carbon dioxide energy storage system be integrated?

Scientific Reports 15, Article number: 22263 (2025) Cite this article Integrating a carbon dioxide energy storage system (CES) with an integrated energy system (IES) can significantly enhance renewable energy utilization, reduce carbon emissions, and improve both economic and environmental performance.

What is the energy-carbon relationship of Integrated Energy Systems?

Firstly, the energy-carbon relationship of the multiple integrated energy systems is established, and the node carbon intensity models of power grid, integrated energy system and shared energy storage station are established. Secondly, a bi-level planning model of shared energy storage station is developed.

Can a low-carbon energy storage system be based on LAEs?

The crucial roles of LAES and carbon capture technologies are addressed with a state-of-the-art literature review. The present study puts forward an innovative low-carbon configuration of an integrated electricity-gas-thermal energy storage system based on LAES, LNG regasification, and gas-fired combustion.

Abstract. Clean and low-carbon is the core task of building a new power system, and the development of an integrated energy system with multiple energy flows is the key. For the "electricity ...

The liquid carbon dioxide energy storage system (LCES), as a highly flexible, long-lasting, and environmentally friendly energy storage technology, shows great potential for application ...

The present study proposes a novel low-carbon configuration of an integrated electricity-gas-thermal energy storage system based on LAES, LNG regasification, and gas-fired combustion. ...

Article Open access Published: 01 July 2025 Optimal scheduling of integrated energy system with gas-liquid phase change carbon dioxide energy storage considering multi-layer low ...

The International Renewable Energy Agency (IRENA) reports that 86% of renewable energy projects now prioritize storage system collaboration. But what makes this cooperation different from traditional ...

Carbon emission trading and green certificate trading mechanisms constitute the cornerstone of low-carbon transitions in integrated energy systems (IESs). However, independent ...

With the proposal of the dual-carbon strategy, the transition to a low-carbon energy system has become a

widely recognized development direction. But this transition is also ...

--With the development of energy storage technology and sharing economy, the shared energy storage in integrated energy system provides potential benef...

This article considers the alliance of integrated energy system- Hydrogen natural gas hybrid energy storage system (IES-HGESS) to achieve mutual benefit and win-win results. Through ...

This paper aims to integrate remaining capacity quantity in battery energy storage systems (BESSs) and a bidirectional distributed data-driven cooperative control framework, which ...
