

# Latest on Israel's solar energy storage policy

Israel's market for behind-the-meter energy storage projects could grow significantly this year, due to new regulations and plans to commission new solar-plus-storage ...

Israel launches a new rooftop solar program in 2025, aiming to add 1.6 GW of capacity by 2030. Learn how this initiative will lower electricity prices for residential and commercial users.

Israel has been rapidly expanding its renewable energy portfolio as part of its national strategy to reduce reliance on fossil fuels. This growth has increased the need for grid-scale energy...

The Israeli government has set a target of producing 30% of its electricity from renewable sources by 2030. Last week, the Israel authorities announced the results of a 1.5 GW energy...

In an effort to drive the country to deploying more energy storage, the Israeli Ministry of Energy and Infrastructure has announced four large-scale battery storage projects.

On August 6, Israeli authorities approved new set of regulations requiring all new detached houses and nonresidential buildings with a roof area of at least 100 and 250 sq. m. ...

Israel's rooftop solar segment is seeing positive regulatory changes as the country adjusts its regulatory framework to boost solar and storage in buildings. Pictured are rooftop solar ...

This chapter examines Israel's evolving solar energy policy while focusing on the political, economic, and social aspects of the motivations and obstacles to its adoption.

Among the selected projects: Solar-driven hydrogen production, "kosher" batteries to power a yeshiva on the Sabbath, and ice bricks that store energy for cooling systems

In 2021, Israeli journalist Sue Surkes argued that one in eight Israelis who wish to install solar panels on their rooftops are unable to do so due to lack of enough space for the grid. Microgrids ...
