

This paper aims to analyze the wind flow in a photovoltaic system installed on a flat roof and verify the structural behavior of the photovoltaic panels mounting brackets.

To investigate the mechanical performance and failure characteristics of photovoltaic support bracket and connections with the cold-formed thin-walled high strength steel, 55 specimens ...

In the established solar panel brackets system, this article conducts numerical simulation on the brackets and optimizes the design of the main beam part of the brackets based on the analysis results.

Abstract: In order to study the mechanical properties of the fixed photovoltaic bracket and its failure under wind load, the full-scale photovoltaic bracket specimen was ...

This study involved the analysis of a photovoltaic power generation project in Hubei Province to compare differences in the structural loads of photovoltaic supports as outlined in ...

In order to achieve the effective use of resources and the maximum conversion rate of photovoltaic energy, this project designs a fixed adjustable photovoltaic bracket ...

In order to study the mechanical properties of the fixed photovoltaic bracket and its failure under wind load, the full-scale photovoltaic bracket specimen was designed and the destructive test was carried ...

Therefore, this paper aims to investigate the application of bionics principles to propose a novel type of photovoltaic bracket pile foundation designed to meet diverse bearing capacity...

This paper designs a fixed adjustable PV bracket structure according to the actual project and performs finite element analysis on the main structure of the bracket, the analysis process ...

GFRP offers strong mechanical properties such as high resistance to corrosion, UV exposure, and weathering, which is essential for outdoor applications like PV mounting systems (Zhang et al., 2024).
