

# Mexican Data Center Rack and Cabinet Type for Substations

Where are servers and networking equipment located in a data center?

Inside a data center, servers and networking equipment are securely housed in racks, cabinets, and cages. Because racks and cabinets are often the first pieces of equipment that organizations install, it is crucial to make informed choices to ensure optimal performance.

What is a data center rack?

Data center racks are metal frames used for organizing IT equipment such as servers and switches. Cabinets are enclosed racks that offer added security and environmental control. Cages are secure areas within a data center that house multiple racks or cabinets, providing an extra layer of security.

What are racks & cabinets in a data center?

In a data center, racks, cabinets, and cages serve to organize, protect, and manage servers and IT hardware. Additionally, they facilitate cable management and airflow for proper cooling of this hardware. Each feature can be differentiated as follows:

What is a data center cage?

A cage, on the other hand, is a secured, enclosed area within a data center that contains one or more racks and offers an extra layer of security and isolation. While racks are used to organize and hold hardware, cages are used to separate and secure the racks, cabinets, and equipment of different customers or projects.
