

As global new energy storage foreign trade orders surge 78% year-over-year (BloombergNEF 2024), we're witnessing a silent revolution where battery packs are becoming the new oil barrels.

As battery manufacturing spreads and prices soften, developers are diversifying supply and implementing new deployment strategies to meet the growing need for dispatchable power.

Despite initiating trade barriers and growth from IRA incentives, U.S. domestic energy storage cell capacity has not expanded significantly. Companies remain cautious, citing policy ...

Explore how leading battery energy storage manufacturers are powering renewable energy, grid stability, and sustainability in 2025.

These components are typically sourced from international suppliers (with China being responsible for around 85% of global battery cell production capacity), which exposes BESS projects ...

The landscape of small energy storage batteries holds transformative potential for foreign trade dynamics, necessitating nuanced strategies for various stakeholders.

Taking advantage of lucrative tax credits offered by the 2022 Inflation Reduction Act (IRA), battery makers from China, South Korea and Japan are investing billions into US factories, ...

The plan specified development goals for new energy storage in China, by 2025, new energy storage technologies will step into a large-scale development period and meet the conditions for large-scale ...

Discover 10 new battery storage companies to watch in 2026 & find out how their solutions will impact your business!

Today, energy storage systems (ESS) are becoming the backbone of international energy strategies. Countries like Germany and Japan now import grid-scale batteries the way they once imported crude ...
