

New energy storage projects on the user side

Accelerated by DOE initiatives, multiple tax credits under the Bipartisan Infrastructure Law and Inflation Reduction Act, and decarbonization goals across the public and private sectors, energy storage will ...

Renewable energy integration and decarbonization of world energy systems are made possible by the use of energy storage technologies. As a result, it provides significant benefits with ...

Over the past 4 years, the National Research Council of Canada (NRC) and a group of international scientists have created a set of computer simulation models for electrical and thermal energy storage ...

If you've ever wondered why your Tesla Powerwall isn't pulling its weight during heatwaves, you're in the right place. New energy storage projects on the user side aren't just ...

These startups develop new energy storage technologies such as advanced lithium-ion batteries, gravity storage, compressed air energy storage (CAES), hydrogen storage, etc. Noon ...

Given the distinct differences between grid-side and user-side energy storage markets, CNESA has, since June 2025, divided its monthly project analysis into two separate reports: grid ...

The project marks a new start for GCL Energy in the field of user-side energy storage in Nanjing, with a total installed capacity of 1.165 MWh and a peak charging and discharging capacity of ...

DTE Energy (NYSE:DTE) today announced the company is issuing a Request for Proposal (RFP) for new standalone energy storage projects totaling approximately 450 megawatts.

Following similar pieces in 2022/23, we look at the biggest energy storage projects, lithium and non-lithium, that we've reported on in 2024.

Global demand for energy storage is surging. Lithium-ion leads today, but new contenders like sodium-ion, flow, and gravity systems are shaping the future grid.
