

The system is mainly used to pump water from the deep well to the water tower, and then to the livestock drinking trough through the water pipeline to supply water for the sheep and camels raised ...

The project will facilitate acquisitions of solar-powered systems for productive uses (including solar irrigation systems), focusing on vulnerable and female-headed households and ...

A solar-powered water pump produced by China's Sunmoy Company recently arrived in Niger. Powered by solar energy, this device provides clean drinking water and agricultural irrigation ...

Alzouma acquired several solar-powered pumps with support from the World Bank-funded Niger Solar Electricity Access Project (NESAP). The pumps and the technical advice he ...

Education on sustainable agricultural practices and efficient water management can maximize the benefits of solar water pumps, paving the way for a more resilient agricultural sector in Niger.

Solar pumps bring irrigation to farms and increase yields in food-insecure, arid Niger. The World Bank-funded Niger Solar Electricity Access Project enables farmers to buy pumps.

In Niger, where 80% of the population relies on agriculture, solar-powered irrigation systems are revolutionizing farming practices. This article explores how these systems address water scarcity, ...

This follows the bank's funding of the Niger Solar Electricity Access Project (NESAP), which enables farmers to buy solar pumps, aiding irrigation and increasing crop yields.

VIENNA, 9th March, 2023 (WAM) -- The OPEC Fund for International Development (OFID) is providing a US\$25 million loan in support of the Niger Solar Plant Development and Electricity Access ...

Solar PV technology applied to water pumping system (WPS) is based on conversion of solar energy into electrical energy by solar panels to power a water pump which drains the aquifer ...
