

Across all regions, developing a skilled workforce and setting ambitious solar and storage targets are essential tasks. In these times of political uncertainty, low-cost solar power could turn into ...

Solar accounted for 58% of all new electricity-generating capacity added to the US grid through the third quarter of 2025, with more than 30 GW installed. Solar and storage, combined, ...

Updated satellite remote sensing imagery and intelligent recognition technology to obtain the latest global wind and solar power plant location data. First-ever integration of hydropower into ...

SEIA reported that the United installed 50.0 GWdc of PV in 2024--up 21% y/y. At the end of 2024, solar was the second-largest source of U.S. generation capacity, though still a growing ...

Beyond utility-scale wind and solar, phaseouts are reshaping other technologies. The residential solar 25D credit sunsets after 2025, pushing installers toward leasing, power purchase agreements ...

Installed U.S. power capacity is forecast to grow 57% by 2050, with three eras: rapid solar energy growth (2025-2035), coal replacement (2035-2040) and steady nuclear expansion ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

In the last few years, solar energy has been the main driver for renewable energy growth worldwide. In 2024, solar photovoltaic capacity additions surpassed 600 gigawatts, accounting for ...

Growth in utility-scale and distributed solar PV more than doubles, representing nearly 80% of worldwide renewable electricity capacity expansion. Low module costs, relatively efficient permitting processes ...

Policymakers in some of the world's largest economies are reducing support for solar power generation. Even so, Goldman Sachs Research expects rapid growth in the sector, with global ...
