

Parcell Solar Power Station in the United States

The U.S. Large-Scale Solar Photovoltaic Database provides the locations and array boundaries of U.S. photovoltaic facilities, with capacity of 1 megawatt or more.

This map provides information about all of the solar photovoltaic (PV) manufacturing facilities in the United States and how they contribute to the solar supply chain.

This map displays information on location, fuel type, electric generation, generating capacity, ownership, and emissions for over 10,000 power plants across the country.

Many of the world's biggest and most productive photovoltaic stations and farms are located in the United States. The nation boasts dozens of solar PV plants whose capacity exceeds 200 megawatts.

The United States is home to a wide variety of power stations. The list below outlines power stations of significance by type, or by the state in which they reside.

Copper Mountain Solar Facility, Solar Star, and Ivanpah are few of the largest solar PV plant projects in the US. Check the complete list of 12 largest solar park projects in the USA.

The new, large-scale solar database contains all ground-mounted commercial U.S. solar photovoltaic facilities with capacities of one megawatt or greater.

Here is a map of all utility-scale planned solar projects in United States. Hover over a planned solar project to view information on each project like their name, capacity and construction date.

Concentrating solar power (CSP) projects in United States are listed below alphabetical by project name. You can browse a project profile by clicking on the project name. You can also access ...

This new, large-scale solar database contains all ground-mounted commercial U.S. solar photovoltaic facilities with capacities of one megawatt or greater.
