

What is a solar land lease?

The exploration of solar land leases reveals their critical role in advancing renewable energy while balancing agricultural productivity and land conservation. These agreements, which define the relationship between landowners and solar developers, are structured to facilitate the efficient use of land for solar energy production.

Can I lease a solar acreage?

Since most solar leases are paid on a per acre per year basis, the larger your parcel is, the more you could make when you lease your land to a solar developer. Not all of your acreage may be suitable for solar panels. Exclusion zones can be thought of as land that solar equipment cannot be placed on for one reason or another.

What are agrivoltaic leases?

They detail the lease duration, designated areas for solar installations, and specific land management requirements. A notable trend within these leases is agrivoltaics, which combines solar power generation with agricultural activities, optimizing land use without compromising agricultural productivity.

How does a solar lease work?

This legal contract grants a solar developer the right to install and maintain a solar panel system on a landowner's property, while they typically sell the generated electricity back to the local utility company. In exchange for the use of their land, the landowner receives lease payments.
