

Moving towards net-zero emissions and to combat climate change, the Singapore government is aiming to achieve 2-Gigawatt-peak (GWp) of solar electricity target by 2030.

In this article, let's explore how renewable energy is rising in Singapore in 2025, what progress has been made, and what individuals and enterprises should know about the country's ...

Singapore's Green Plan targets include deploying 1.5 GWp of solar energy by 2025, as well as reducing the waste to landfill by 20 per cent by 2026, and 30 per cent by 2030.

Solar energy has become an essential element of Singapore's strategy to enhance its renewable energy landscape and achieve its energy objectives. The government actively promotes ...

Solar energy - the most viable source of renewable energy for Singapore - is one of the country's four key 'switches' to achieve its net-zero target by 2050. The other three are natural...

Real-time information on solar energy generated can be seen under the Solar Irradiance Map. This makes Singapore an ideal location to tap on solar energy as a clean energy source to generate ...

Singapore's focus on research and test-bedding is to improve the performance of solar systems and develop innovative ways of integrating solar energy systems into our urban environment.

As one of the most carbon-emitting countries per capita, the country has made an ambitious goal to have net-zero emissions by around 2050. Its most recent project is an international ...

This article explores how solar energy supports the Green Plan's objectives, the government initiatives driving its adoption, and the benefits it brings to both businesses and households.

In our recent study, published in *Applied Energy* in August 2024, we employed systems thinking and system dynamics (ST& SD) modelling methodology to evaluate Singapore's aspiring solar energy ...
