

Will the global solar PV market grow in 2025?

Despite these headwinds, the global solar PV market is still expected to grow by 10% in 2025, reaching 655 GW under the Medium Scenario (see Fig. 4). This would mark a continuation of the deceleration trend following the extraordinary 85% growth in 2023 and the more moderate 33% in 2024.

How has global solar PV manufacturing capacity changed over the last decade?

Global solar PV manufacturing capacity has increasingly moved from Europe, Japan and the United States to China over the last decade. China has invested over USD 50 billion in new PV supply capacity - ten times more than Europe - and created more than 300 000 manufacturing jobs across the solar PV value chain since 2011.

Does China have a dominance in the solar PV manufacturing market?

While China's dominance in the solar PV manufacturing market is unmatched, it has challenges. The industry has been grappling with significant overcapacity despite phenomenal growth in domestic solar installations and in export volumes.

What will the solar industry look like in 2025?

The solar industry is poised for transformative growth in 2025. From advanced materials to smart technology and sustainable manufacturing, these trends are shaping a future where solar panels are more efficient, affordable, and accessible than ever.

Solar panel technology advances include greater solar cell efficiency and the use of new and more abundant solar panel materials.

The US solar industry installed 11.7 GW of capacity in Q3 2025, the third largest quarter for deployment in the industry's history.

Solar supply chain in China increased by 29% in 2024. Image: Avaada Group. Australian thinktank Climate Energy Finance (CEF) has forecast global solar module manufacturing capacity to ...

IEA PVPS has released its latest Trends in Photovoltaic Applications 2025 report, revealing that the world's cumulative installed PV capacity surpassed 2 260 GW by the end of 2024, marking a 29% ...

Welcome to the Global Market Outlook for Solar Power 2025-2029 The year 2024 was a true landmark year for solar power. Global solar installations reached nearly 600 GW - an ...

This payback period compares with the average solar panel lifetime of around 25-30 years. Electricity provides 80% of the total energy used in solar PV manufacturing, with the majority ...

CEF notes the IEA consistently underestimates the pace of the global solar PV, BESS and electric vehicle (EV) disruption and the growth in manufacturing capacity. Analysing market ...

As the demand for renewable energy surges, solar panels are becoming more accessible for homes and businesses. In this article, we explore the key trends reshaping the solar power ...

o The proportion of wind and solar traded in wholesale markets will jump from 52% in 2024 to ~100% in 2025. o The resulting revenue uncertainty--which may slow PV growth after 2025 ...

Discover 2025 solar panel trends: perovskite advancements, market growth forecasts, and AI integration. Learn how innovations drive efficiency. Click for expert insights!
