

TuNur is developing a series of renewable energy projects that will produce low-cost green electrons and molecules in Tunisia for export. Each export project consists of three components:

With an average of over 3,000 hours of sunlight annually, Tunisia is ideally positioned to harness solar power to meet its energy demands sustainably. The importance of solar energy in Tunisia lies in its ...

The ELMED interconnection project, which will link Tunisia to Italy by 2028, will play a key role in stabilizing energy supply, while supporting the energy transition in Tunisia and Europe.

solar PV and wind together accounting for nearly 70%. The integration of these variable energy sources into national energy grids will largely depend on storage technologies, and among them especially ...

This report provides an initial insight into various energy storage technologies, continuing with an in-depth techno-economic analysis of the most suitable technologies for Finnish conditions, namely ...

Other experts, however, argue that there should be no delay in preparing the infrastructure needed for storage, especially given the rapid fall in the cost of solar and wind energy ...

This article explores cutting-edge technologies, local case studies, and actionable insights for stakeholders in North Africa's growing clean energy market.

The World Bank is looking to recruit a technical consultant that will advise on a proposed large-scale solar-plus-battery storage project in Tunisia. The consultancy work will centre around a...

The World Bank, in collaboration with Tunisia's Ministry of Industry, Mines, and Energy (MIME), has announced the need for a technical study for a substantial 350-400 MWp solar project ...

Tunisia's energy storage power generation sector is transforming faster than a desert sunset. With solar irradiation levels hitting 5.3 kWh/m<sup>2</sup>/day and wind speeds reaching 9 m/s in coastal areas, this North ...
