

Two primary engineering challenges are en route to fabricating high-performance flexible stainless-steel based Cu (In,Ga) (S,Se) <sub>2</sub> solar cells; Growing absorbers without contamination from ...

In this contribution, we prepared high efficiency CIGS thin film solar cells on flexible stainless steel substrate by three-stage coevaporation method.

This study investigated the integration of perovskite solar cells (PSCs) on stainless steel (SS) substrates for application in building-integrated photovoltaics (BIPV).

Stainless steel (SS) foil is made of abundant materials and is a durable and flexible substrate, but the efficiency of a solar cell on SS foil deteriorates via the diffusion of impurities from the SS substrate ...

Stainless steel is also used in photovoltaic (PV) cells, particularly in flexible substrates for thin-film solar cells. These substrates provide a stable base for the photovoltaic material, enhancing ...

Here, we demonstrate stainless-steel (SS) foil as a multifunctional application that simultaneously serves as a flexible substrate, conductive bottom electrode, and robust barrier layer, offering high thermal ...

This paper reports on a facile bottom-up method for the direct integration of a silicon (Si)-magnesium silicide (Mg <sub>2</sub> Si) heterojunction solar cell (HSC) with a textured rear reflector made of stainless steel ...

It provides designers with information about current stainless steel options for solar energy capture and an overview of the technical properties of stainless steel.

**Abstract:** This work demonstrates the perovskite (CH <sub>3</sub> NH <sub>3</sub> PbI <sub>3</sub>) solar cell devices on flexible stainless-steel as a substrate that can be used for flexible electronics applications.The ...
