

The forum conducted in-depth discussions on the latest support policies of the state for desert photovoltaic power stations, as well as how to solve and cope with the difficult problems in the ...

Desmopan[®] and Texin[®] can be described by a wide range of mechanical properties, from stiffness to tensile behavior under pressure and many more. Desmopan[®] and Texin[®] grades range in hardness ...

Desmopan[®] and Texin[®] offer outstanding resistance to wear by virtue of its high tear and tear propagation resistance combined with its elasticity. Under certain conditions, e.g. wet abrasion, ...

Texin 255D resin offers excellent fuel and oil resistance, as well as outstanding abrasion resistance, impact strength, toughness, and flexibility. Typical applications include toplifts, seals, gaskets, ...

It has high elasticity, excellent low-temperature impact strength and flexibility over a wide temperature range. It is easy to color. Thermoplastic polyurethanes allow for very thin gauges while maintaining ...

To improve the span and stiffness and widen the application scene of the flexible photovoltaic support system, a new type of three-dimensional cable-truss flexible photovoltaic support...

This study involved the analysis of a photovoltaic power generation project in Hubei Province to compare differences in the structural loads of photovoltaic supports as outlined in ...

It offers excellent inherent resistance to saltwater stress cracking, and hydrolysis. It is suitable for processing by injection molding, extrusion and blow molding. It exhibits outstanding ...

Covestro's Texin[®] TPU resins provide designers with a versatile material that can be used in a wide range of applications. Typical applications include casters, power tools, sporting goods, medical ...

In this paper, the mechanical properties and wind resistance of a new type of cable-truss support photovoltaic module system are analyzed. The superiority of the cable-truss support system ...
