

What are thin film solar panels?

Thin film solar panels are a type of photovoltaic solar panel made by depositing one or more thin layers, or thin film (TF) of photovoltaic material on a substrate. They are lighter and more flexible than traditional crystalline-based solar panels, which can make them beneficial for certain installations.

When did thin-film solar panels come out?

In 1980, researchers finally achieved a 10% efficiency, and by 1986 ARCO Solar released the G-4000, the first commercial thin-film solar panel. Thin-film solar panels require less semiconductor material in the manufacturing process than regular crystalline silicon modules, however, they operate fairly similar under the photovoltaic effect.

How much do thin film solar panels cost?

This can make them a good fit for applications where space is limited or for integrating solar panels into unconventional surfaces, similar to how some modern vehicles integrate technology to maximize performance and user experience. Thin film solar panels generally cost between \$0.50 and \$1.00 per watt.

Where can I buy thin-film solar panels in the UK?

You can buy thin-film solar panels in the UK, but as they're not as common as standard solar panels, you should expect the process of finding an installer to take longer.
