

30 GW Energy storage target by 2025 at a federal level. Multiple provincial targets will likely exceed this.

Global installed energy storage capacity by scenario, 2023 and 2030 - Chart and data by the International Energy Agency.

Globally, annual energy storage deployment (excluding pumped hydropower plants) is set to hit another all-time high at 92 gigawatts (247 gigawatt-hours) in 2025 - 23% higher than in 2024. ...

We explore the data to see where the clean energy transition stands today, from rising investment and job growth to grid needs and critical mineral demand.

Global installed energy storage is on a steep upward trajectory. From just under 0.5 terawatts (TW) in 2024, total capacity is expected to rise ninefold to over 4 TW by 2040, driven by ...

Find the latest statistics and facts on energy storage.

Most of today's systems are lithium-ion, but alternatives like sodium-ion, flow batteries, and iron-air designs are emerging to extend storage from hours to days--critical for true grid...

Here, total global generation capacity and total electricity storage are derived from the IMAGE model (see Fig. 1). The development of the global grid and the disaggregation of electricity ...

The report provides a current market overview of the global energy storage industry, including recent trends, drivers, challenges, and outlook in major countries across Europe and the Americas. The ...

The energy storage sector maintained its upward trajectory in 2024, with estimates indicating that global energy storage installations rose by more than 75%, measured by megawatt-hours (MWh), year-over ...
