

What to do if the solar inverter displays a white screen

How do I know if my solar inverter is working?

Inspect DC Wiring (MC4 Connectors). Look for any visible scorch marks or loose MC4 connectors coming from the solar panels into the inverter. Only check connections if you are comfortable and have de-energized the system. If grid-connected, verify that your home's power supply is working.

How do professional solar technicians diagnose inverter problems?

Professional solar technicians use tools like oscilloscopes, I-V curve tracers, and thermal imaging to identify inverter faults that are invisible to the naked eye. They can also test system grounding, insulation resistance, and voltage harmonics--critical when diagnosing deeper solar inverter problems.

Why is my inverter screen blank?

Specific Causes for Blank Screen: Overheating (causing a temporary shutdown), firmware glitch, or a loose ribbon cable/damaged LCD screen. Ensure the inverter is receiving power from the solar panels or grid. Listen closely. Is the cooling fan running, or do you hear a slight hum? If yes, the inverter may be working, but the display is faulty.
