

Wind turbine fires not only cause huge asset losses and affect the stable supply of electricity, but also may lead to serious environmental and ecological impacts and even personal injuries.

Fires in wind turbines are happening ten times more often than they are reported, according to new research from Imperial College London, the University of Edinburgh and SP Technical Research Institute ...

Work is underway to remove a wind turbine off the Norfolk coast that was catastrophically damaged by fire. Turbine T06 on the Scroby Sands wind farm caught fire on 15 August 2023, and its...

A fire in a wind turbine that sent smoke billowing over Mid North South Australia has sparked worries that such a blaze could result in a bushfire on a hotter and windier day.

What causes wind turbines to catch fire? There are diverse reasons why fires can occur in wind turbines, although it is worth noting that such events are relatively rare.

Wind turbine fires pose a significant global problem, leading to substantial financial losses. However, due to limited open discussions and lax regulations in the wind power industry, progress in ...

A wind-turbine fire can spread to the surrounding environment, sparking wildfires and potentially spreading into nearby communities. As such, stakeholders at the government and community level are likely ...

Fires in wind turbines are happening ten times more often than ...

For the industry to realise its full potential, wind developers and their engineering teams will need to take urgent steps to protect against rising fire risks, says Brian Cashion, director of engineering at ...

A study conducted by SP Safety at the Technical Research Institute of Sweden showed that 10-30% of all loss-of-power-generation incidents in wind power plants are due to fire.

Once a fire is ignited in a wind turbine, the situation rapidly escalates because the high wind favoured by turbine locations enhances the supply of oxygen and, hence, the fire growth.
