

Looking at a turbine through the lens of a high-resolution camera from the ground is one of the safest inspection methods out there. Yet there's a reason why most wind farms rely on rope ...

The client uses a fleet of various robotics and drones to conduct inspections across multiple industries, this includes wind turbine inspections. Using the lidar capabilities of the drone, in addition to the ...

This study provides a comprehensive overview and in-depth discussion on WT experiments in wind tunnels, which is expected to facilitate the solution of theoretical problems in ...

MISTRAS" highly-trained rope access technicians provide advanced inspection and maintenance services that keep wind turbine blades durable and reliable. Our goal is to keep your renewable wind ...

In this work, we propose a wind turbine regulator based on blade-pitch actuation and assess the impact of adopted turbine derating strategies on aerodynamic loading and downstream ...

DNV offers a complete range of inspection services for onshore and offshore wind turbines and their components. Our inspections provide completely objective and independent information on: This ...

AETC provides critical evaluation and support for NASA's Aeronautics and Space Missions with world class wind tunnel testing including the development of new test technologies and facility capabilities.

Discover essential insights on wind turbine inspection, critical for energy efficiency and longevity, exploring modern methods and drone technology.

ATS" rope access division performs wind turbine inspections quickly, safely, and efficiently saving clients significant inspection costs. Guaranteeing not only the safety but also the general operation of your ...

Purpose: To provide minimum requirements for wind tunnel tests to determine wind loads on and response of buildings and other structures.
